BC I/II S24 Final Exam Information

Date/Time/Location: Tuesday, May 28, 8:00am-10:00am, Main Gym

Please bring the completed checklists (see the last pages) with you to the exam.

General Information

1. The final exam is **mandatory** for everyone.
2. No calculators, notes, or formula sheets are allowed.
3. There is a strict 2 hour time limit and there is **no** opportunity to retake any portion of the exam.

Content

The exam consists of two sections, covering the 28 learning standards. Section 1 covers the 17 core learning standards, and is **mandatory** for everyone. This will take place during the final exam time listed above. The final exam grade is computed from section 1 alone. Section 2 covers the 11 non-core learning standards. This section is **optional**, and does not count toward the final exam grade. You only need to answer the questions covering any learning standards on which you would like to improve your grade. Your performance on this optional section cannot lower your grade. Section 2 will be given during the last week of classes. The date will be announced on canvas and in class.

Section 1 (Mandatory) Description

- Each question is no more difficult than the Level 2 questions on the checkpoints throughout the semester.
- Some questions may address multiple learning standards at once, but each learning standard will be scored individually based on the evidence presented in the solutions.
- Each learning standard will receive 0,1, or 2 points, with 2 corresponding to evidence of meeting the standard at Level 2, and 1 corresponding to meeting the standard at Level 1 but not Level 2.
    - To earn a 2 on a given learning standard:
        - Prerequisites must be used correctly. That is, there can be no significant algebra/trig/precalculus/earlier calculus concepts mistakes. A solution with such mistakes cannot score higher than a 1.
        - Mathematical notation must be used consistently and correctly. Any solution not employing the proper notation cannot score higher than a 1.
        - All relevant work / steps must be shown clearly and the final answer clearly indicated. Any solution with significant steps missing cannot score higher than a 1.
        - When using a theorem, it must be *concisely* explained (do not write a book) why all necessary hypotheses hold. Any solution either not addressing the hypotheses or containing serious errors (e.g., adding an irrelevant hypothesis, other irrelevant details, or ignoring a hypothesis) cannot score higher than a 1.
        - Writing should be included whenever warranted (e.g., in justifying a conclusion), and should be clear and easy to follow (again, please be

concise - do not write a book). Any relevant graphs or diagrams should be included and properly labeled, if applicable.
        - An appropriate method of solution should be used and the solution should be correct, up to 1-2 insignificant errors (e.g., copying down a sign wrong or something of that nature, as long as the error doesn't greatly simplify the rest of the problem).
        - In general, it should be easy for me to tell what you are doing, that you know what you are doing, and that you can clearly and concisely communicate what you are doing (through an appropriate combination of writing, notation, showing work/steps, and/or graphs/charts/diagrams, as applicable).
    - A solution which makes good progress but has multiple and / or serious enough deficiencies in the above will receive a score of 1.
    - A question left blank or a solution demonstrating minimal or no evidence of meeting the learning standard will receive a score of 0.
- A grade of 80% (27/34) or higher will augment a C or B to a C+ or B+, respectively. A final grade of 50% (17/34) or below will augment a C, B, or A to C-, B-, or A-, respectively, and will augment a C+ or B+ to C or B, respectively.
- Additionally, the scores on individual learning standards on the final exam can be used to "level up" on these learning standards, and I will adjust the scores in powerschool accordingly. For example, if one currently is at Level 0 or Level 1 in powerschool on DC.3 and scores a "2" on DC.3 on the final exam, then the grade in powerschool for DC.3 will be increased to Level 2. A score of "1" on DC.3 will increase a Level 0 to Level 1, and will leave a Level 1 unchanged.
- No scores in powerschool will be "leveled down". For example, if one currently is at Level 1 or Level 2 for DC.3 and scores "0" on DC.3 on the final, then this will result in a lower final exam score (as described above), but the Level 1 or Level 2 in powerschool will remain unchanged.

Learning Standard Checklist **Name**_____

Instructions: Please print (one-sided) and fill out this checklist using your current powerschool grades. Make sure to bring it with you to the final exam. I will be unable to look up this information for individual students at the final. You may ***not*** include any other writing, formulas, etc. on this sheet (including descriptions of the learning standards). All checklists will be checked before starting the final and must be turned in at the end. Any additional writing or anything printed on the back of this page may result in the checklist being confiscated.
